

FAN COIL UNITS GASPING FOR AIR? REFURBISHMENT COULD BE THE ANSWER.

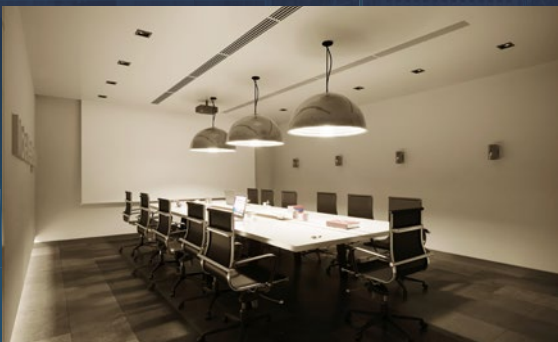

From highly efficient EC/DC motors to modulating temperature control, Fan Coil Unit (FCU) technology is advancing at an incredible pace.

As the UK's pre-eminent FCU manufacturer, we recognise the environmental and economical benefits of refurbishing ageing components, rather than replacing entire units.

With options for direct replacement parts, through to full upgrades incorporating the latest in energy saving components and controls, we have a solution for every installation.

From the bedroom to the bathroom, we can refresh products from any manufacturer.
