

Standard, Packaged, and Class 1 Air Handling Units

Standard air handling unit

Company overview and product range

Aircraft Air Handling Ltd design and build air handling units to customer's requirements. Air handling units are engineered to provide quality flexible designs and versatile specifications.

The full range covers:

- Standard Air Handling Units
- Packaged Air Handling Units
- Class 1 Air Handling Units
- Twin Fan Extracts
- Mini Air Handling Units
- Classroom Ventilation Units
260mm to 380mm high
- Vertical options
- In-ceiling
260mm to 380mm high

Standard Air Handling Units

The 21 basic unit sizes range from volumes of 0.5 m³/s to 20 m³/s. See web site for full range of sizes.

Covering the everyday applications, of 25mm and 50mm double skinned standard air handling units, this range can be manufactured to any dimensions. Easily supplied in 'knock-down' form making it ideal for refurbishment projects.

The flat internal surfaces enable it to be easily cleaned and making it suitable for applications in industries such as food and pharmaceuticals. Hospital and Health Authority specifications are also covered. Internally painted and stainless steel units for swimming pool and abrasive environmental conditions are available.

Suitable for internal or external application.

All units available in flatpack format. Site assembled by our engineers.

Packaged Heat Recovery Units

HTM-03 compliant hospital air handling unit
