

WATER TREATMENT SOLUTIONS

Culligan are a worldwide water treatment company. We have been established for over 80 years and we operate in over 90 countries.

In Europe we have our own manufacturing plant which gives us design and build capabilities.

We can provide a complete range of water treatment plant including:

- **Water softeners**
- **Water conditioners**
- **Reverse osmosis systems**
- **Filtration systems**
- **Ultra violet disinfection units**
- **Chlorine dioxide units**

Combined with our experience and capabilities we are ideally placed to advise you on your water treatment requirements for any project.

We design, install and commission all commercial and industrial water equipment. We can offer on site surveys to establish the optimum use of water and other utility resources. We also have an experienced service department which ensures our customers receive excellent after-sales service.

New High Efficiency Water Softener Range.

The most effective way to condition water by removing scale forming minerals.

Product features:

- **Aqua-Sensor®**: adjusts to water conditions and reduces operating costs and accelerates return on investment through significant water and salt savings.
- **Dial Softness**: enables users to blend some hard water back into the outlet, minimising corrosivity and excess softness.
- **Remote display** can be placed up to 60 metres away from the softener, making it easy to monitor and control the system.

Benefits of the High Efficiency Softener Range:

- Up to 46% savings on water, salt and energy compared to basic system.
- Removing just 1mm of scale can reduce heating bills by at least 10%.
