

Engineering Excellence in Water Cooled Chiller Solutions

Energy Efficient Chiller Innovations

Daikin Applied chillers include many energy-efficient innovations such as inverter controls, free cooling, heat recovery and high efficiency compressors, so you can depend on a Daikin Applied chiller for the very highest levels of energy efficiency and reliability throughout its long service life.

Water cooled chillers are compact and require very limited space in a machine room. Used for commercial or industrial applications, these chillers generate cold and hot water, so can be used for chilling, heating or both simultaneously.

DWSC/DWDC Chiller Series
Water Cooled Centrifugal

Cooling from 300kW to 9000kW

DZ Chiller Series
Oil Free Water Cooled Centrifugal
R-134a & R-1234ze(E) solutions

Cooling up to 2173kW

VZ Chiller Series
Water Cooled Inverter
R-134a & R-1234ze(E) solutions

Cooling from 450kW to 2100kW
