

HUMIDIFICATION AND EVAPORATIVE COOLING SYSTEMS

For commercial and industrial buildings

Properly controlled humidification enhances occupant health and comfort, improves manufacturing processes, and helps preserve building materials and furnishings.

DriSteem humidification systems control the humidity level to between 40 and 60% RH to reduce the spread of viruses that infect our respiratory tract like COVID-19 and the seasonal flu. This is also the best RH range for maintaining a healthy environment overall, because it also reduces bacteria and allergens.

In short, any building housing people or things will benefit from proper humidification, and the cost to add humidification is easily offset by gains in processes, productivity, life of materials, and occupant wellbeing.

Humidity Matters Ltd is the UK supplier of DriSteem humidification equipment, including isothermal steam humidifiers, steam dispersion systems, and evaporative, or adiabatic, humidifiers.

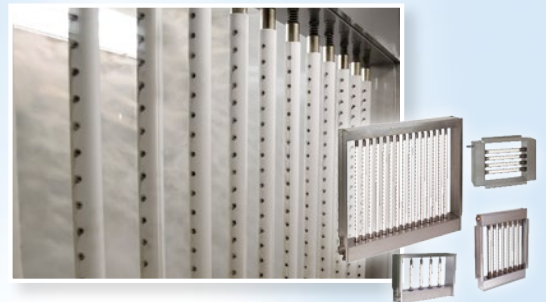

We also offer planned maintenance, service and commissioning agreements to guarantee humidifier efficiency and humidity range.

Learn more at www.humiditymatters.co.uk or www.dristeem.com.

Isothermal steam humidifiers

- Gas-fired condensing
- Electrode and resistive
- Steam-to-steam

Steam dispersion systems

- Panels (for short absorption)
- Multi-tube
- Single tube

Evaporative cooling systems

- High/low pressure systems
- Wetted media system
