

FIRE & SMOKE DAMPER INSPECTION & TESTING

You Are Just 3 Simple Steps Away From Peace of Mind...

Step 1 - Survey

Working from plans, schematics or by visiting your site, we will locate the fire dampers in your premises and plan your testing programme.

Step 2 - Inspection & Testing

We will visually check and drop test each and every accessible fire damper. Then reset it, to ensure it is ready for action.

Step 3 - Reporting

We will provide you with an industry leading, comprehensive report.

For compliance, we detail damper type and location, accessibility, testing results and photographic evidence.

Where required, we can undertake all necessary remedial works.

Compliance & Convenience

Fire dampers play a crucial role in a building's fire safety system.

The difference between well maintained working fire dampers and ill maintained or partially working fire dampers, can be the difference between life and death in the case of a fire.

Our teams will test your fire dampers with the minimum of disruption. We operate 24/7 so we can work at a time to suit you.

Have Peace of Mind

With industry leading reporting and specialists to advise you on the latest fire safety best practice, you are just 3 simple steps from peace of mind.
