

Solray Radiant Panels: Practical, reliable and cost-effective heating solutions

- Energy efficient
- Cost effective
- Space saving
- Tailor-made in the UK
- Hygienic
- Safe

Energy efficient

Our panel system combines radiation, conduction and convection to offer excellent heating or cooling performance.

The specially designed panels offer maximum heat transmission with the minimum of surface temperature differentials.

Cost effective

Our system can be used with low or medium temperature hot water, steam or electricity.

Combined with optimum heat distribution, this offers significant savings on running costs compared to other heating systems.

Space saving and attractive

Unlike most traditional heating systems, our panels take up little or no space, which will maximise available floor area and wall space – crucial in buildings such as schools and leisure centres. Additionally, our panels can either blend seamlessly into the environment or be designed as an attractive feature.

Hygienic

Often concealed within the ceiling, our panels have no corners, ledges or joints where dirt or harmful bacteria can collect.

Being flat, they are also easy to clean and create far less dust and air movement than ordinary convective heating systems – reducing potential discomfort for staff, patients, customers or visitors with breathing difficulties.

Safe

No bulky, protruding units, edges or corners – our flush panels represent an extremely safe option in hallways, sports halls and corridors.

In addition, our steel panels have been approved by the Ministry of Justice (NOMS approval). Their anti-ligature design makes them ideal for use in high security areas.

Tailor-made in the UK to meet your needs

Our radiant heating panels are manufactured right here in the UK, which means you get a highly responsive UK team and it's also good for the economy and the environment.

Panels can be manufactured to suit your specific project requirements including custom sizes and shapes to fit most areas.

And it doesn't stop there – our radiant panels can be manufactured in a variety of materials and finishes to complement the building and project specifications.

You can also be assured of the quality. Solray systems are designed and manufactured to the highest standards. But then, we haven't remained in business for 100 years without consistently delivering very high standards.
