

–weishaupt–

NO_x emissions below 30 mg/kWh

Everywhere in the world, NO_x emission limits are becoming ever tighter. Weishaupt's new range of Premix Low NO_x (PLN) burners have been developed for use in applications where ultra-low emission levels are being demanded. Premixing with surface-stabilised combustion is environmentally friendly, reliable, and efficient. Already well-established in small condensing boilers, Weishaupt has now extended the benefits of this technology to monarch® burners rated up to 2500 kW.

That's reliability
