

MVHR CAN HELP YOU WITH PART F

Tightening regulations are constricting modern buildings, and ventilating them correctly is becoming difficult with traditional systems. Mechanical ventilation with heat recovery solves this problem. As recognised in System 4 of the Building Regulations 'Approved Document F: Ventilation' MVHR provides fresh filtered air without a significant penalty to your energy efficiency. Specifying these new systems is easy, and they can be integrated into almost any building design.

For advice and support on your projects, please call 0344 879 3587 or email pre-sales@glendimplex.com

Simply Silent Fan

- Near-silent running minimises disturbance in domestic and commercial environments
- Achieves an 88% improved extraction rate against comparable in-line shower fans
- Meets building regulations at installed performance

XPLUS 2 EC Central Extract Unit

- Low energy, multi-point domestic and commercial ventilation unit
- Flexible siting, multiple spigot connections and high-performance extraction
- Long life, energy efficient EC motors, allow for Part F configuration requirements

Whisper Ceiling Sweep Fan

- Commercial ceiling fan provides a cool circulation of air in hot and humid conditions
- Can be used as heat destratification units in winter to reduce heating costs
- Ideal for use in public buildings, factories and other commercial applications
